

READY REGIONS® ECCE Supply/Demand Dashboard

How can I download a screenshot or PowerPoint from the dashboard?

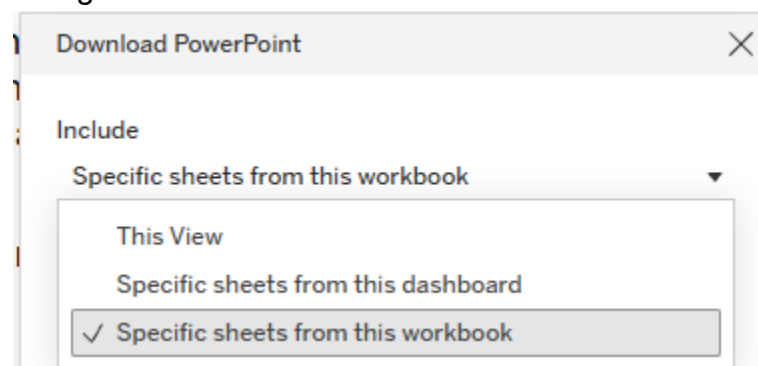

1. To download a screenshot from the dashboard, first make sure that: 1) the dashboard is on the page you are interested in downloading and 2) the filters are set to your geographic area of interest.
2. Look at the bottom right corner of the dashboard. There is a button with a rectangle and a downwards arrow. Click on this button.

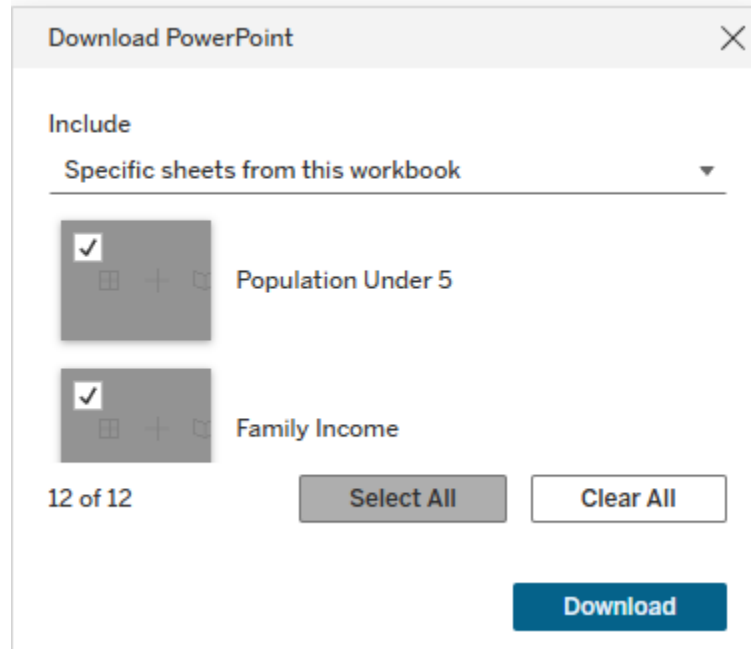

3. Clicking this button will bring up a menu of possible download options. **To download a screenshot**, choose the **Image** download option. This will download a PNG image of the current dashboard page.

4. In addition to a single screenshot, the dashboard supports the downloading of a PowerPoint deck with one or more pages of the dashboard included in it as slides. **To download a PowerPoint**, choose the **PowerPoint** download option. This will bring up the following menu:

5. If you choose “This View”, the PowerPoint will be the same as the screenshot: an image of the current dashboard page. Instead, choose “**Specific sheets from this workbook**”. This brings up a list of *all pages* in the dashboard. You can choose one or more pages to include in the PowerPoint file; each page will be downloaded as an individual PowerPoint slide.

The PowerPoint slides will automatically be filtered to the filter choices that were selected prior to hitting the download button.
